A screenshot of a Windows Command Prompt window titled "Administrator: Command Prompt". The window has a light green title bar with standard minimize, maximize, and close buttons. The main area is black with white text. The prompt is "C:\Python>". The user has entered the command "python --version", and the output is "Python 3.12.4". The prompt is now "C:\Python>_".

```
C:\Python>python --version
Python 3.12.4
C:\Python>_
```

Python Print Function Assignment

Python

print function assignment.py

print function assignment.py > ...

```
1 # Python Print Function Practice Questions
2 # 1. Basic Printing:
3 # Write a Python script to print the phrase 'Hello, World!'.
4 print("'Hello, World!'.")
5 # Print your first name.
6 print('Amir')
7 # 2. Printing Multiple Items:
8 # Print your first name and last name in a single print statement.
9 print ("Amir Rashid")
10 # Print the numbers 1, 2, and 3 in a single print statement.
11 print(1, 2, 3)
12 # 3. Printing Special Characters:
13 # Print a string that includes a newline character to display text on two lines. For example:
14 # Hello
15 # World
16 print("Hello\nWorld")
17 # Print a string that includes a tab character. For example:
18 # Hello World
19 print("Hello\tWorld")
20 # 4. Using the sep Parameter:
21 # Print three different words separated by commas. For example: 'apple, banana, cherry'.
22 print ('apple', 'banana', 'cherry', sep=', ')
23 # Print three different numbers separated by hyphens. For example: '1-2-3'.
24 print (1, 2, 3, sep='-')
25 # 5. Using the end Parameter:
26 # Print two words on the same line with a space in between. For example: 'Hello World'.
27 print('Hello','World', end=' ')
28 # Print the numbers 1 and 2 on the same line without a space in between. For example: '12'.
29 print('\n',1,2, sep='')
30 # 6. Escape Characters:
31 # Print a string that includes double quotes. For example: He said, "Hello!".
32 print('He said, "Hello".')
33 # Print a backslash character. For example: This is a backslash: \.
34 print("This is a backslash: \\.")
35 # 7. Combining Text and Numbers:
36 # Print your age alongside a descriptive message. For example: 'I am 20 years old'.
37 age = 59
38 print(f"I am {age} years old'.")
39 # Print a number and a string together. For example: 'The number is 5'.
40 number = 5
41 print(f"The number is {number}'.")
42 # 8. Basic loop Printing:
43 # Print the numbers 1 to 5, each on a new line using separate print statements.
44 print(1,2,3,4,5, sep='\n')
```
